Dedicated hosting perfectly matched to your software.

In essence, application hosting is turnkey.

Tangle Media prizes the performance and stability of our product. If we build a software system, we want it to work for years, with no hassles. **You shouldn't need to engage a second technical team for hardware.**

We provide hosting for our clients so that we can ensure quality and accountability. Tangle Media hosts our data in secure Canadian facilities with dedicated 24/7 staff to ensure uptime, security, availability, and hardware support. Our servers are 100% private and exclusive. We don't host any sites by third parties. Because Tangle Media's systems are highly integrated with the server, we can ensure excellent technical solutions matched perfectly with server hardware. We pay for servers up to a year in advance at these facilities in order to guarantee continuity for our customers.
